Beginner's Essential

# Javascript Cheat Sheet

The language of the web.

## Table of Contents

Javascript Basics	2
Variables	2
Arrays	3
Operators	4
Functions	5
Loops	7
If - Else Statements	7

Strings	7
Regular Expressions	9
Numbers and Math	10
Dealing with Dates	12
DOM Node	14
Working with the Browser	18
Events	21
Errors	27

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 1

## Javascript Basics

### Including JavaScript in an HTML Page

```
<script type="text/javascript">  
    //JS code goes here  
</script>
```

### Call an External JavaScript File

```
<script src="myscript.js"></script><code></code>
```

### Including Comments

```
//
```

Single line comments

```
/* comment here */
```

Multi-line comments

## Variables

### var, const, let

**var**

The most common variable. Can be reassigned but only accessed within a function. Variables defined with var move to the top when code is executed.

**const**

Cannot be reassigned and not accessible before they appear within the code.

**let**

Similar to const, however, let variable can be reassigned but not re-declared.

## Data Types

**var age = 23**

Numbers

**var x**

Variables

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 2

**var a = "init"**

Text (strings)

**var b = 1 + 2 + 3**

Operations

**var c = true**

True or false statements

**const PI = 3.14**

Constant numbers

**var name = {firstName:"John", lastName:"Doe"}**

Objects

## Objects

```
var person = {  
  firstName:"John",  
  lastName:"Doe",  
  age:20,  
  nationality:"German"  
};
```

## Arrays

```
var fruit = ["Banana", "Apple", "Pear"];
```

## Array Methods

### `concat()`

Join several arrays into one

### `indexOf()`

Returns the first position at which a given element appears in an array

### `join()`

Combine elements of an array into a single string and return the string

### `lastIndexOf()`

Gives the last position at which a given element appears in an array

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 3

### `pop()`

Removes the last element of an array

### `push()`

Add a new element at the end

### `reverse()`

Reverse the order of the elements in an array

### `shift()`

Remove the first element of an array

### `slice()`

Pulls a copy of a portion of an array into a new array of 4 24

### `sort()`

Sorts elements alphabetically

### `splice()`

Adds elements in a specified way and position

### `toString()`

Converts elements to strings

### `unshift()`

Adds a new element to the beginning

`valueOf()`

Returns the primitive value of the specified object

# Operators

## Basic Operators

- + Addition
- Subtraction
- \* Multiplication
- / Division
- (..) Grouping operator
- % Modulus (remainder)
- ++ Increment numbers
- Decrement numbers

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 4

## Comparison Operators

- == Equal to
- === Equal value and equal type
- != Not equal
- !== Not equal value or not equal type
- > Greater than
- < Less than
- >= Greater than or equal to
- <= Less than or equal to
- ? Ternary operator

## Logical Operators

- && Logical and
- || Logical or
- ! Logical not

## Bitwise Operators

- & AND statement
- | OR statement
- ~ NOT
- ^ XOR
- << Left shift
- >> Right shift
- >>> Zero fill right shift

# Functions

```
function name(parameter1, parameter2, parameter3) {  
    // what the function does  
}
```

## Outputting Data

**alert()**

Output data in an alert box in the browser window

**confirm()**

Opens up a yes/no dialog and returns true/false depending on user click

**console.log()**

Writes information to the browser console, good for debugging purposes WebsiteSetup.org -

Beginner's Javascript Cheat Sheet 5

**document.write()**

Write directly to the HTML document

**prompt()**

Creates an dialogue for user input

## Global Functions

**decodeURI()**

Decodes a Uniform Resource Identifier (URI) created by encodeURIComponent or similar

**decodeURIComponent()**

Decodes a URI component

**encodeURIComponent()**

Encodes a URI into UTF-8

**encodeURIComponent()**

Same but for URI components

**eval()**

Evaluates JavaScript code represented as a string

### **isFinite()**

Determines whether a passed value is a finite number

### **isNaN()**

Determines whether a value is NaN or not

### **Number()**

Returns a number converted from its argument

### **parseFloat()**

Parses an argument and returns a floating point number

### **parseInt()**

Parses its argument and returns an integer

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 6

## **Loops**

```
for (before loop; condition for loop; execute after loop) {  
    // what to do during the loop  
}  
for
```

The most common way to create a loop in Javascript

### **while**

Sets up conditions under which a loop executes

### **do while**

Similar to the while loop, however, it executes at least once and performs a check at the end to see if the condition is met to execute again

### **break**

Used to stop and exit the cycle at certain conditions

### **continue**

Skip parts of the cycle if certain conditions are met

# If - Else Statements

```
if (condition) {  
    // what to do if condition is met  
} else {  
    // what to do if condition is not met  
}
```

## Strings

```
var person = "John Doe";
```

### Escape Characters

```
\' - Single quote  
\" - Double quote  
\\ - Backslash  
\b - Backspace  
\f - Form feed  
\n - New line  
\r - Carriage return  
\t - Horizontal tabulator
```

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 7

```
\v - Vertical tabulator
```

### String Methods

**charAt()**

Returns a character at a specified position inside a string

**charCodeAt()**

Gives you the unicode of character at that position

**concat()**

Concatenates (joins) two or more strings into one

**fromCharCode()**

Returns a string created from the specified sequence of UTF-16 code units

**indexOf()**

Provides the position of the first occurrence of a specified text within a string

**lastIndexOf()**

Same as indexOf() but with the last occurrence, searching backwards

### `match()`

Retrieves the matches of a string against a search pattern

### `replace()`

Find and replace specific text in a string

### `search()`

Executes a search for a matching text and returns its position

### `slice()`

Extracts a section of a string and returns it as a new string

### `split()`

Splits a string object into an array of strings at a specified position

### `substr()`

Similar to `slice()` but extracts a substring depended on a specified number of characters

### `substring()`

Also similar to `slice()` but can't accept negative indices

### `toLowerCase()`

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 8  
Convert strings to lowercase

### `toUpperCase()`

Convert strings to uppercase

### `valueOf()`

Returns the primitive value (that has no properties or methods) of a string object

## Regular Expressions

### Pattern Modifiers

**e** - Evaluate replacement

**i** - Perform case-insensitive matching

**g** - Perform global matching

**m** - Perform multiple line matching

**s** - Treat strings as single line

**x** - Allow comments and whitespace in pattern

U – Non Greedy pattern

## Brackets

[abc] Find any of the characters between the brackets  
[^abc] Find any character not in the brackets  
[0-9] Used to find any digit from 0 to 9  
[A-z] Find any character from uppercase A to lowercase z  
(a|b|c) Find any of the alternatives separated with |

## Metacharacters

. – Find a single character, except newline or line terminator \w  
– Word character  
\W – Non-word character  
\d – A digit  
\D – A non-digit character  
\s – Whitespace character  
\S – Non-whitespace character  
\b – Find a match at the beginning/end of a word  
\B – A match not at the beginning/end of a word  
\0 – NUL character  
\n – A new line character  
\f – Form feed character  
\r – Carriage return character  
\t – Tab character  
\v – Vertical tab character

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 9

\xxx – The character specified by an octal number xxx \xdd – Character specified by a hexadecimal number dd \uxxxx – The Unicode character specified by a hexadecimal number xxxx

## Quantifiers

n+ – Matches any string that contains at least one n  
n\* – Any string that contains zero or more occurrences of n  
n? – A string that contains zero or one occurrences of n  
n{X} – String that contains a sequence of X n's  
n{X,Y} – Strings that contains a sequence of X to Y n's  
n{X,} – Matches any string that contains a sequence of at least X n's  
n\$ – Any string with n at the end of it  
^n – String with n at the beginning of it  
?=n – Any string that is followed by a specific string n  
?!n – String that is not followed by a specific string n

# Numbers and Math

## Number Properties

### MAX\_VALUE

The maximum numeric value representable in JavaScript

### MIN\_VALUE

Smallest positive numeric value representable in JavaScript

### NaN

The “Not-a-Number” value

### NEGATIVE\_INFINITY

The negative Infinity value

### POSITIVE\_INFINITY

Positive Infinity value

## Number Methods

### toExponential()

Returns a string with a rounded number written as exponential notation

### toFixed()

Returns the string of a number with a specified number of decimals

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 10

### toPrecision()

String of a number written with a specified length

### toString()

Returns a number as a string

### valueOf()

Returns a number as a number

## Math Properties

### E Euler's number

### LN2 The natural logarithm of 2

### LN10 Natural logarithm of 10

### LOG2E Base 2 logarithm of E

### LOG10E Base 10 logarithm of E

### PI The number PI

**SQRT1\_2** Square root of 1/2  
**SQRT2** The square root of 2

## Math Methods

**abs(x)**

Returns the absolute (positive) value of x

**acos(x)**

The arccosine of x, in radians

**asin(x)**

Arcsine of x, in radians

**atan(x)**

The arctangent of x as a numeric value

**atan2(y,x)**

Arctangent of the quotient of its arguments

**ceil(x)**

Value of x rounded up to its nearest integer

**cos(x)**

The cosine of x (x is in radians)

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 11

**exp(x)**

Value of  $E^x$

**floor(x)**

The value of x rounded down to its nearest integer

**log(x)**

The natural logarithm (base E) of x

**max(x,y,z,...,n)**

Returns the number with the highest value

**min(x,y,z,...,n)**

Same for the number with the lowest value

**pow(x,y)**

X to the power of y

**random()**

Returns a random number between 0 and 1

**round(x)**

The value of x rounded to its nearest integer

**sin(x)**

The sine of x (x is in radians)

**sqrt(x)**

Square root of x

**tan(x)**

The tangent of an angle

## Dealing with Dates

### Setting Dates

**Date()**

Creates a new date object with the current date and time

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 12

**Date(2017, 5, 21, 3, 23, 10, 0)**

Create a custom date object. The numbers represent year, month, day, hour, minutes, seconds, milliseconds. You can omit anything you want except for year and month.

**Date("2017-06-23")**

Date declaration as a string

### Pulling Date and Time Values

**getDate()**

Get the day of the month as a number (1-31)

**getDay()**

The weekday as a number (0-6)

### **getFullYear()**

Year as a four digit number (yyyy)

### **getHours()**

Get the hour (0-23)

### **getMilliseconds()**

The millisecond (0-999)

### **getMinutes()**

Get the minute (0-59)

### **getMonth()**

Month as a number (0-11)

### **getSeconds()**

Get the second (0-59)

### **getTime()**

Get the milliseconds since January 1, 1970

### **getUTCDate()**

The day (date) of the month in the specified date according to universal time (also available for day, month, fullyear, hours, minutes etc.)

### **parse**

Parses a string representation of a date, and returns the number of milliseconds since January 1, 1970

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 13

## **Set Part of a Date**

### **setDate()**

Set the day as a number (1-31)

### **setFullYear()**

Sets the year (optionally month and day)

### **setHours()**

Set the hour (0-23)

### **setMilliseconds()**

Set milliseconds (0-999)

### **setMinutes()**

Sets the minutes (0-59)

### **setMonth()**

Set the month (0-11)

### **setSeconds()**

Sets the seconds (0-59)

### **setTime()**

Set the time (milliseconds since January 1, 1970)

### **setUTCDate()**

Sets the day of the month for a specified date according to universal time (also available for day, month, fullyear, hours, minutes etc.)

## **DOM Node**

### **Node Properties**

#### **attributes**

Returns a live collection of all attributes registered to and element

#### **baseURI**

Provides the absolute base URL of an HTML element

#### **childNodes**

Gives a collection of an element's child nodes

WebsiteSetup.org - Beginner's Javascript Cheat Sheet **14**

#### **firstChild**

Returns the first child node of an element

#### **lastChild**

The last child node of an element

#### **nextSibling**

Gives you the next node at the same node tree level

#### **nodeName**

Returns the name of a node

**nodeType**

Returns the type of a node

**nodeValue**

Sets or returns the value of a node

**ownerDocument**

The top-level document object for this node

**parentNode**

Returns the parent node of an element

**previousSibling**

Returns the node immediately preceding the current one

**textContent**

Sets or returns the textual content of a node and its descendants

**Node Methods****appendChild()**

Adds a new child node to an element as the last child node

**cloneNode()**

Clones an HTML element

**compareDocumentPosition()**

Compares the document position of two elements

**getFeature()**

Returns an object which implements the APIs of a specified feature

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 15

**hasAttributes()**

Returns true if an element has any attributes, otherwise false

**hasChildNodes()**

Returns true if an element has any child nodes, otherwise false

**insertBefore()**

Inserts a new child node before a specified, existing child node

**isDefaultNamespace()**

Returns true if a specified namespaceURI is the default, otherwise false

**isEqualNode()**

Checks if two elements are equal

**isSameNode()**

Checks if two elements are the same node

**isSupported()**

Returns true if a specified feature is supported on the element

**lookupNamespaceURI()**

Returns the namespaceURI associated with a given node

**lookupPrefix()**

Returns a DOMString containing the prefix for a given namespaceURI, if present

**normalize()**

Joins adjacent text nodes and removes empty text nodes in an element

**removeChild()**

Removes a child node from an element

**replaceChild()**

Replaces a child node in an element

## **Element Methods**

**getAttribute()**

Returns the specified attribute value of an element node

**getAttributeNS()**

Returns string value of the attribute with the specified namespace and name WebsiteSetup.org -

Beginner's Javascript Cheat Sheet 16

**getAttributeNode()**

Gets the specified attribute node

**getAttributeNodeNS()**

Returns the attribute node for the attribute with the given namespace and name

**getElementsByTagName()**

Provides a collection of all child elements with the specified tag name

#### **getElementsByTagNameNS ()**

Returns a live HTMLCollection of elements with a certain tag name belonging to the given namespace

#### **hasAttribute ()**

Returns true if an element has any attributes, otherwise false

#### **hasAttributeNS ()**

Provides a true/false value indicating whether the current element in a given namespace has the specified attribute

#### **removeAttribute ()**

Removes a specified attribute from an element

#### **removeAttributeNS ()**

Removes the specified attribute from an element within a certain namespace

#### **removeAttributeNode ()**

Takes away a specified attribute node and returns the removed node

#### **setAttribute ()**

Sets or changes the specified attribute to a specified value

#### **setAttributeNS ()**

Adds a new attribute or changes the value of an attribute with the given namespace and name

#### **setAttributeNode ()**

Sets or changes the specified attribute node

#### **setAttributeNodeNS ()**

Adds a new namespaced attribute node to an element

## **Working with the Browser**

### **Window Properties**

**closed**

Checks whether a window has been closed or not and returns true or false

**defaultStatus**

Sets or returns the default text in the statusbar of a window

**document**

Returns the document object for the window

**frames**

Returns all <iframe> elements in the current window

**history**

Provides the History object for the window

**innerHeight**

The inner height of a window's content area

**innerWidth**

The inner width of the content area

**length**

Find out the number of <iframe> elements in the window

**location**

Returns the location object for the window

**name**

Sets or returns the name of a window

**navigator**

Returns the Navigator object for the window

**opener**

Returns a reference to the window that created the window

**outerHeight**

The outer height of a window, including toolbars/ scrollbars

WebsiteSetup.org - Beginner's Javascript Cheat Sheet **18**

**outerWidth**

The outer width of a window, including toolbars/ scrollbars

**pageXOffset**

Number of pixels the current document has been scrolled horizontally

**pageYOffset**

Number of pixels the document has been scrolled vertically

**parent**

The parent window of the current window

**screen**

Returns the Screen object for the window

**screenLeft**

The horizontal coordinate of the window (relative to screen)

**screenTop**

The vertical coordinate of the window

**screenX**

Same as screenLeft but needed for some browsers

**screenY**

Same as screenTop but needed for some browsers

**self**

Returns the current window

**status**

Sets or returns the text in the statusbar of a window

**top**

Returns the topmost browser window

**Window Methods****alert()**

Displays an alert box with a message and an OK button

**blur()**

Removes focus from the current window

**clearInterval()**

Clears a timer set with setInterval()

**clearTimeout()**

Clears a timer set with `setTimeout()`

**`close()`**

Closes the current window

**`confirm()`**

Displays a dialogue box with a message and an OK and Cancel button

**`focus()`**

Sets focus to the current window

**`moveBy()`**

Moves a window relative to its current position

**`moveTo()`**

Moves a window to a specified position

**`open()`**

Opens a new browser window

**`print()`**

Prints the content of the current window

**`prompt()`**

Displays a dialogue box that prompts the visitor for input

**`resizeBy()`**

Resizes the window by the specified number of pixels

**`resizeTo()`**

Resizes the window to a specified width and height

**`scrollBy()`**

Scrolls the document by a specified number of pixels

**`scrollTo()`**

Scrolls the document to specific coordinates

**`setInterval()`**

Calls a function or evaluates an expression at specified intervals

**setTimeout()**

Calls a function or evaluates an expression after a specified interval

**stop()**

Stops the window from loading

## Screen Properties

**availHeight**

Returns the height of the screen (excluding the Windows Taskbar)

**availWidth**

Returns the width of the screen (excluding the Windows Taskbar)

**colorDepth**

Returns the bit depth of the color palette for displaying images

**height**

The total height of the screen

**pixelDepth**

The color resolution of the screen in bits per pixel

**width**

The total width of the screen

# Events

## Mouse

**onclick**

The event occurs when the user clicks on an element

**oncontextmenu**

User right-clicks on an element to open a context menu

**ondblclick**

The user double-clicks on an element

User presses a mouse button over an element

#### **onmouseenter**

The pointer moves onto an element

#### **onmouseleave**

Pointer moves out of an element

#### **onmousemove**

The pointer is moving while it is over an element

#### **onmouseover**

When the pointer is moved onto an element or one of its children

#### **onmouseout**

User moves the mouse pointer out of an element or one of its children

#### **onmouseup**

The user releases a mouse button while over an element

## **Keyboard**

#### **onkeydown**

When the user is pressing a key down

#### **onkeypress**

The moment the user starts pressing a key

#### **onkeyup**

The user releases a key

## **Frame**

#### **onabort**

The loading of a media is aborted

#### **onbeforeunload**

Event occurs before the document is about to be unloaded

#### **onerror**

An error occurs while loading an external file

### **onhashchange**

There have been changes to the anchor part of a URL

### **onload**

When an object has loaded

### **onpagehide**

The user navigates away from a webpage

### **onpageshow**

When the user navigates to a webpage

### **onresize**

The document view is resized

### **onscroll**

An element's scrollbar is being scrolled

### **onunload**

Event occurs when a page has unloaded

## **Form**

### **onblur**

When an element loses focus

### **onchange**

The content of a form element changes (for <input>, <select>and <textarea>)

### **onfocus**

An element gets focus

### **onfocusin**

When an element is about to get focus

### **onfocusout**

The element is about to lose focus

### **oninput**

User input on an element

### **oninvalid**

An element is invalid

### **onreset**

A form is reset

### **onsearch**

The user writes something in a search field (for <input="search">)

### **onselect**

The user selects some text (for <input> and <textarea>)

### **onsubmit**

A form is submitted

## **Drag**

### **ondrag**

An element is dragged

### **ondragend**

The user has finished dragging the element

### **ondragenter**

The dragged element enters a drop target

### **ondragleave**

A dragged element leaves the drop target

### **ondragover**

The dragged element is on top of the drop target

### **ondragstart**

User starts to drag an element

### **ondrop**

Dragged element is dropped on the drop target

## **Clipboard**

### **oncopy**

User copies the content of an element

### **oncut**

The user cuts an element's content

### **onpaste**

A user pastes content in an element

## **Media**

### **onabort**

Media loading is aborted

### **oncanplay**

The browser can start playing media (e.g. a file has buffered enough)

### **oncanplaythrough**

When browser can play through media without stopping

### **ondurationchange**

The duration of the media changes

### **onended**

The media has reached its end

### **onerror**

Happens when an error occurs while loading an external file

### **onloadeddata**

Media data is loaded

### **onloadedmetadata**

Meta Metadata (like dimensions and duration) are loaded

### **onloadstart**

Browser starts looking for specified media

### **onpause**

Media is paused either by the user or automatically

### **onplay**

The media has been started or is no longer paused

### **onplaying**

Media is playing after having been paused or stopped for buffering

### **onprogress**

Browser is in the process of downloading the media

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 25

### **onratechange**

The playing speed of the media changes

### **onseeked**

User is finished moving/skipping to a new position in the media

### **onseeking**

The user starts moving/skipping

### **onstalled**

The browser is trying to load the media but it is not available

### **onsuspend**

Browser is intentionally not loading media

### **ontimeupdate**

The playing position has changed (e.g. because of fast forward)

### **onvolumechange**

Media volume has changed (including mute)

### **onwaiting**

Media paused but expected to resume (for example, buffering)

## **Animation**

### **animationend**

A CSS animation is complete

### **animationiteration**

CSS animation is repeated

### **animationstart**

CSS animation has started

## **Other**

### **transitionend**

Fired when a CSS transition has completed

### **onmessage**

A message is received through the event source

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 26

### **onoffline**

Browser starts to work offline

### **ononline**

The browser starts to work online

### **onpopstate**

When the window's history changes

### **onshow**

A <menu> element is shown as a context menu

### **onstorage**

A Web Storage area is updated

### **ontoggle**

The user opens or closes the <details> element

### **onwheel**

Mouse wheel rolls up or down over an element

### **ontouchcancel**

Screen touch is interrupted

### **ontouchend**

User finger is removed from a touch screen

### **ontouchmove**

A finger is dragged across the screen

### **ontouchstart**

Finger is placed on touch screen

## **Errors**

### **try**

Lets you define a block of code to test for errors

### **catch**

Set up a block of code to execute in case of an error

WebsiteSetup.org - Beginner's Javascript Cheat Sheet 27

**throw**

Create custom error messages instead of the standard JavaScript errors

**finally**

Lets you execute code, after try and catch, regardless of the result

## **Error Name Values**

**name**

Sets or returns the error name

**message**

Sets or returns an error message in string from

**EvalError**

An error has occurred in the eval() function

**RangeError**

A number is "out of range"

**ReferenceError**

An illegal reference has occurred

**SyntaxError**

A syntax error has occurred

**TypeError**

A type error has occurred

**URIError**

An encodeURI() error has occurred
